

PRODUCT INTRODUCTION

2-in-1 Functional Cosmetic · Brightening + Wrinkle Improvement | 50ml

Supports recovery and calms the skin — softening fine lines for smooth, luminous brightness.

The first condition for damaged skin to regenerate is a stable, hydrated environment.

PGA + HA (Hyaluronic Acid) deliver powerful water retention to rapidly address moisture deficiency, while reparative actives such as **Dexpanthenol** and **Squalane** help restore the skin barrier.

Proprietary **PlusSome™** technology makes actives cling to the skin like a magnet, delivering moisture and calming energy deep into the lower epidermis — exactly where skin becomes sensitive and rough after in-clinic treatments.

PGA + HA

Hydration Duo

Ultra-concentrated water binding

Dexpanthenol

Calming + Barrier repair

4×

CICA Complex

Madecassoside regeneration

1. Hybrid Formula — Hydration + Barrier Recovery

When the skin's protective layer opens up after a treatment, this formula rapidly replenishes moisture and activates the skin's regenerative energy.

- **Ultra-Concentrated Hydration (PGA + HA): Polyglutamic Acid** and **Hyaluronic Acid** draw thousands of times their molecular weight in water, quickly soothing burning, tight, dry sensations.
- **Skin-Recovery Formula: 98% pure Dexpanthenol** efficiently calms the skin while **Squalane** forms a biological protective film over thinned, fragile skin — accelerating recovery of the compromised barrier.
- **High-Concentration CICA Complex (4-CICA): 4 actives derived from Madecassoside** reinforce the skin's natural regenerative ability.

2. PlusSome™ — Magnetic Absorption Technology

However excellent the ingredients are, they're meaningless if the skin cannot absorb them. PlusSome™ technology maximizes the skin's absorption capacity.

- **(+/-) Bio-Charge Mechanism:** Skin naturally carries a **(-) charge**. The liposomes encapsulating the actives are engineered with a **(+) charge** through PlusSome™, so they cling firmly to the skin's surface.
- **Magnetic Absorption:** Like two opposing poles of a magnet, the negative and positive charges pull the actives firmly into the skin — delivering nutrients deep into the lower epidermis quickly.
