

PRODUCT INTRODUCTION

2-in-1 Functional Cosmetic · Brightening + Wrinkle Improvement | 50ml

Liposome-encapsulated PDRN, Dexpanthenol & Sucralfate fused with LUBYLAB's exclusive CICA complex — soothing care for skin made sensitive by treatments and irritation.

Designed for skin that becomes extremely sensitive after in-clinic treatments — formulated with **PDRN (Salmon DNA)**, a powerful regenerative ingredient widely used in dermatology and wound healing.

The cream applies our proprietary **Deepflex™** technology (flexible oil droplets) that adapts its shape and absorbs along the skin's structure, delivering regenerative energy directly to the dermis with no tackiness.

Tissue protection

1. "Medical Grade" Active Profile — Recovery After Treatments

Goes beyond ordinary skincare — restores skin damaged by treatments, calms and regenerates through a complete 3-step care mechanism.

- **98% Pure Dexpanthenol — Calming & Anti-Inflammatory:** Reduces **PGE2** — a key inflammation trigger in the skin — at its source, quickly soothing post-treatment burning and redness.
- **Sucalfate — Protection & Tissue Repair:** A powerful mucosal-protective ingredient (often used in ulcer treatment), encapsulated in tiny liposomes. On damaged skin it forms a protective film like '**artificial skin**', blocking external irritants completely.
- **Sodium DNA (PDRN) & Concentrated Cica: PDRN** — the core ingredient of 'Salmon DNA injection therapy' — combines with **Centella Asiatica** extract to activate the regeneration of damaged cells, restoring skin to its original healthy state.

2. Apply, It Absorbs — Deepflex™ Technology

After treatments, skin is sensitive and easily irritated. No need to layer or rub — the cream self-absorbs at first contact.

- **Flexible Oil-Drop System:** Unlike conventional creams, the oil droplets are wrapped in a **Flex Spacer** that lets them shape-shift, slipping into every gap of the skin and absorbing deep within.
- **Oil-Bursting Technology:** Eliminates the heavy, sticky feel typical of recovery creams. Moisturizing oil droplets burst on contact — leaving skin soft, hydrated and supple while the surface stays light and breathable.

PDRN · DEXPANTHENOL · SUCRALFATE · CICA · DEEPFLEX™
